JUNIOR DATA ENGINEER | TECHNICAL DATA ANALYST | PYTHON | SQL | DASHBOARDS | DATA ENGINEERING

PROFESSIONAL SUMMARY

Junior Data Engineer and Technical Data Analyst with 3+ years of combined experience across software engineering, backend development, data analytics, and business intelligence systems. Skilled in Python, SQL, Django/FastAPI, Node.js, React, PostgreSQL, BI dashboards, and data automation. Experienced across e-commerce, event management, NLP research, and analytics automation.

KEY ACHIEVEMENTS

- Peer-reviewed NLP researcher - Lead author, ICTer Journal (Indexed), May 2024. Awarded the ICTer 2025 Bronze Medal for Research & Innovation.
- Accelerated API data rendering by 40% via optimised Django REST Framework endpoints at Antarions analytics platform (GCP Cloud Run, pytest 85% coverage).
- Engineered a full-stack venue booking system managing 200+ live bookings, cutting manual financial reconciliation by ~4 hours/week (Crystal Events, UK).
- Optimised PostgreSQL reporting workflows through schema improvements and multi-join query refactoring, improving report performance and invoice visibility.
- Reduced e-commerce reporting effort by 50% by building multichannel analytics dashboards (Shopify + Amazon) with CI/CD-integrated deployments (Virosa Group, UK).
- Graduated MSc Data Science & Analytics with Merit - University of Westminster, UK (2025).

WORK EXPERIENCE

Technical Data Analyst & Full Stack Developer | Crystal Events & Management, United Kingdom

January 2026 - Present

- Engineered a full-stack venue booking management system (React + Node.js + PostgreSQL) supporting 200+ active bookings, cutting manual reconciliation by ~4h/week.
- Extended enquiry handling across Hayes, Wembley and Slough through three email workflows, improving branch-level coordination and response management.
- Added chatbot result visibility for admins, simplified image uploads, and created a sales-team login for showcasing event hall decoration packages.
- Integrated automatic logo branding for uploaded event photos, improving presentation quality and brand consistency.
- Implemented Agile/Scrum sprint cycles, delivering iterative dashboard features aligned with business KPIs.

E-commerce Data Analyst & Full Stack Developer | Virosa Group, United Kingdom

May 2025 - October 2025

- Built multichannel sales analytics dashboards (Chart.js + React) monitoring Shopify and Amazon revenue, reducing reporting time by 50%.
- Developed Express.js APIs aggregating real-time user activity and conversion data, reducing server-side overhead by 30%.
- Implemented demand-driven stock forecasting models, helping reduce overstock risk.
- Collaborated in an Agile/Scrum team; maintained CI/CD pipelines via GitHub Actions.

Backend Developer (Python / Django / NLP) | Antarions - IT Domain, Australia (Remote)

January 2024 - December 2024

- Designed and optimised Django REST Framework API endpoints for BI dashboards, accelerating data rendering speed by 40%.
- Engineered a context-aware NLP chatbot (NLTK + spaCy) for relational database queries and automated data retrievals.
- Deployed containerised Django services on GCP Cloud Run with CI/CD pipelines for zero-downtime releases.
- Achieved 85%+ test coverage via comprehensive pytest suite across API and data layers.

Software Engineer Intern (Java / Spring Boot) | Informatics International Limited, Sri Lanka

2022 - 2023

- Developed and tested Java Spring Boot microservices; wrote unit/integration tests using JUnit and Mockito, achieving high coverage on key service modules.
- Collaborated with senior engineers on REST API integrations, code reviews, and technical documentation - gaining exposure to enterprise software delivery practices.

SELECTED PROJECTS

1. Event Management Venue Platform - React, Node.js, PostgreSQL, Express.js, financial analytics; supported 200+ bookings and improved reconciliation efficiency.
2. Virosa E-Commerce Analytics Dashboard - Shopify, Amazon, Chart.js, React, forecasting; reduced reporting effort by 50%.
3. Antarions BI Platform & NLP Chatbot - Django REST, PostgreSQL, spaCy, GCP Cloud Run; improved BI data rendering and chatbot-driven retrieval.
4. TAMZHI NLP Transliteration Engine - Python, NLP, scikit-learn, published research; supported multilingual accessibility and transliteration accuracy.

EDUCATION

- MSc in Data Science & Analytics (Merit)
University of Westminster, United Kingdom (2024 - 2025)
Modules: Business Analytics, Data Visualisation & Dashboarding, Data Mining & Machine Learning, Data Warehousing & Business Intelligence, Big Data Theory and Practice.
- BEng (Hons) in Software Engineering
University of Westminster, United Kingdom - delivered through IIT, Sri Lanka (2020 - 2023)
Modules: OOP Software Design, Database Engineering, Algorithms, Systems Architecture, Web Architectures.

PUBLICATIONS & HONOURS

- TAMZHI NLP Research - Lead Author: "TAMZHI: Shorthand Romanized Tamil to Tamil Reverse Transliteration Using Novel Hybrid Approach."
Published: International Journal on Advances in ICT for Emerging Regions (ICTer), Vol. 16(1), May 2024. Indexed. 90%+ transliteration accuracy.
Designed to support digital accessibility for Tamil language users and multilingual applications.
- ICTer 2025 Bronze Medal - Applied Research & Innovation Award.

CORE TECHNICAL SKILLS

- Backend Engineering: Python (Django REST Framework, FastAPI), Java (Spring Boot, Microservices), Node.js (Express.js), RESTful APIs, API Design, ETL Pipelines, Data Modelling
- Data Science & AI: Machine Learning, NLP (NLTK, spaCy, LangChain, RAG), TensorFlow, scikit-learn, Pandas, NumPy, SQL (PostgreSQL, MySQL), Power BI, Tableau, Data Visualisation
- Frontend & Mobile: React.js, JavaScript (ES6+), HTML5/CSS3, Chart.js
- Cloud & DevOps: GCP (Cloud Run, GCS), Docker, GitHub Actions, CI/CD Pipelines, Git/GitHub, Agile/Scrum, Jira
- Testing: pytest, JUnit, Mockito, Unit & Integration Testing
